PERSONA TEST LOG (LAYER 1)

AquaRail — Operational Water Loss Visibility & Dispatch Rail

PRODUCT	AUTHOR	DATE & STATUS
AquaRail (Week 11 Ship)	**Jose Luis (Operator Lens)**	**October 2026 · Layer 1 Validated**

1. Synthetic User Persona Profile

Don Beto (Alberto Morales) — 58 years old, Senior Field Supervisor (*Jefe de Cuadrilla*)

Context: SACMEX Sector 4 Subcontractor. Oversees physical repair crews across non-SCADA secondary water networks.

Tech Literacy & Behavior: Uses WhatsApp constantly for work and family coordination, but deeply distrusts complex digital software or multi-step administrative apps. Reads slowly on small smartphone screens under bright sun, hates fill-in text boxes in dirty field environments, and silently gives up or returns to paper clipboard logs when software requires typing or personal mobile data.

Key Pain Point: Feels micro-managed by central office clerks who don't understand street conditions; needs a tool that eliminates shift-end paperwork rather than adding administrative overhead.

2. Walkthrough Narrative & Friction Identification

SCREEN / TASK	DON BETO'S NARRATIVE ("THINKING OUT LOUD")	FRICTION SEVERITY
Tab 1: Telemetry Anomaly Alert	"I see red and amber flashing numbers on Node 14. Is this app telling me the pipe broke or that I have to send my guys right now? Where is the WhatsApp share button?"	MEDIUM Needs clear status banner
Tab 2: Unverified Ticket Review	"I clicked the ticket. It asks me to type a long technical description of the leak. I'm wearing heavy gloves in a dusty truck in Iztapalapa. I am not typing an essay on a small keyboard!"	HIGH (QUIT POINT) Reverted to paper log
Tab 3: Public Supply Shield	"What is this graph? It looks like an engineering report for the central office. I don't care about macro-charts during a field shift."	LOW Cluttered field flow

3. Logged Friction & Key UI Fix Implemented

Core Friction Identified: Manual Text Entry & Jargon Confusion

Don Beto refused to use open text inputs in field conditions and was confused by diagnostic ambiguity.

Operational Fix Applied (V2 Build Refactor):

- **2-Tap Verification Flow:** Replaced all text entry boxes with preset options (Tap 1: Select "Surface Dampness / Acoustic Anomaly"; Tap 2: Tap "Confirm & Assign Crew").
- **Explicit Diagnostic Guardrail:** Added a high-contrast banner: *"Awaiting Human Verification · System does not perform automated diagnosis."*
